

Animation Assignment #3

DUE - 2/9/16

For this assignment you must create a 5-8 second stop motion animation.

This can be done with a still digital camera or even a cell phone (make sure you have a tripod), remember you will need two shots of each movement. This is an exercise to give you a sense of the work involved in animated films. Keep it simple!

When you are finished, load the animation on youtube or vimeo and post the link on this page. They must be posted before class starts on 2/29/16.

Here are some links for advice on how to make a short animation and links to free software for creating stop motion films:
